SUMMARY

Team lead and full-stack engineer with three years at Techloset Solutions, now leading a team of six engineers across full-stack, mobile and AI workstreams. I architect MERN ecosystems, enterprise LMS platforms and local-LLM integrations, and ship them through CI/CD pipelines on AWS and Azure. Recent work includes a Streamline-integrated cabin rental platform running in production and an AI speed-to-quote agent that owns a lead from first contact to signed deposit.

EXPERIENCE

TECHLOSET SOLUTIONS — Faisalabad, Pakistan

Team Lead Jul 2026 – Present

- Lead a team of six engineers and set technical direction across full-stack, mobile and AI workstreams.
- Direct technical architecture and infrastructure planning across concurrent client projects — enterprise LMS platforms, AI integrations and SaaS products.
- Own deployment lifecycles delivered through CI/CD pipelines across AWS and Azure.
- Mentor developers across the stack and grow engineering leadership capacity.

Senior Software Engineer Feb 2026 – Apr 2026

- Orchestrated the Big Bear Cabins integration against the exclusive Streamline API, synchronising property management, reservation and live availability data for a platform now running in production.
- Architected and deployed large-scale Learning Management Systems with complex user hierarchies, secure video delivery and backend workflow automation.
- Integrated and fine-tuned local Large Language Models to enable offline-first, client-controlled AI workflows.
- Engineered and maintained automated CI/CD pipelines across AWS and Azure; improved production reliability through observability and disciplined deployment practice.

Software Engineer Feb 2025 – Jan 2026

- Built dynamic, responsive systems across the MERN stack, TypeScript and Tailwind CSS.
- Translated complex business requirements into scalable solutions spanning frontend, backend and cloud layers.
- Optimised backend performance and database interaction patterns using modern ORMs such as Prisma.

Junior Developer Jan 2024 – Feb 2025

- Contributed to MERN-stack client projects across the full development lifecycle, from requirements through production support.

Trainee Developer Aug 2023 – Jan 2024

- Trainee placement, run concurrently with the SEERAHT internship below.

SEERAHT — Faisalabad, Pakistan

Full-Stack Development Intern Feb 2023 – Jan 2024

- Hands-on training in full-stack development on real-world projects — JavaScript, React, Next.js, Node.js, databases, APIs and version control.
- Ran concurrently with the Techloset trainee placement from August 2023.

SELECTED PROJECTS

Big Bear Cabins bigbearcabins.com · github.com/abdiopp/big-bear-cabins-next

Cabin rental platform on Next.js, wired to the exclusive Streamline API so property management, reservations and live

availability stay in sync. Next.js · TypeScript · Streamline API

Greenscape Speed-to-Quote github.com/abdiopp/greenscape-speed-to-quote

An AI agent owning the whole lead clock: lead in, qualified by SMS in seconds, priced draft, approval, then proposal, Stripe deposit link and CRM write-back. Every integration beyond two credentials degrades to a recorded mock. TypeScript · Claude API · Stripe · PostgreSQL

Virtual Try-On AI github.com/abdiopp/virtual-tryon-ai-mvp

Two-stage try-on backend: FLUX.1-schnell generates the garment through Hugging Face Inference Providers, IDM-VTON performs the try-on through a Space Gradio API. Modular FastAPI core with a Next.js App Router dashboard. Python · FastAPI · Hugging Face · Next.js

XDM Next github.com/abdiopp/downloader-rust

Download manager for macOS and Windows: a Rust engine doing multi-connection segmented HTTP downloads, yt-dlp and ffmpeg for 1000+ streaming sites, BitTorrent via librqbit, and a Chrome extension capturing downloads over a local bridge. Rust · Tauri v2 · React · Tailwind CSS

App Cycler github.com/abdiopp/auto-cycler

Desktop app that rotates focus through chosen windows and steps through each one's tabs on a timer. Built for wall displays, NOC screens and demo loops, with a global kill-switch hotkey. Python · macOS · Windows

ADDITIONAL CLIENT WORK

- **Dinex** Cut delivery from six months to two days with an SEO-optimised, accessibility-first site blueprint on React, Next.js and Prismic.
- **HGO** Migrated content infrastructure from Sanity to DatoCMS and built custom CMS plugins for relational content models, reducing hosting costs by roughly 50%.
- **Techloset Admin** Modernised the internal React/TypeScript/Firestore dashboard and restructured query patterns, cutting database reads by roughly 50%.
- **Phlare / Canapoy LMS** Built the learning management system and its Node.js APIs, including video-streaming integration and media delivery workflows.
- **Linked AI** Full-stack matchmaking platform in TypeScript and Node.js with deterministic scoring pipelines for structured, explainable matching.
- **Thimble** Shipped features within a HIPAA-aligned workflow, applying privacy-conscious API design across sensitive user flows.
- **Pixelfield** Integrated a TensorFlow Lite model into a React Native app through native bindings for on-device inference.

SKILLS

Core TypeScript · JavaScript · React · Next.js · Node.js · Express · React Native · Prisma · PostgreSQL · MongoDB · Tailwind CSS · REST APIs

AI Local LLMs · LLM fine-tuning · Claude API · Hugging Face · FastAPI

Cloud & DevOps AWS · Azure · CI/CD pipelines · Observability · Vercel · Firebase

Leadership Technical architecture · Infrastructure planning · Team leadership · Mentoring

Also worked with Rust · Python · GraphQL · Redux · Stripe · Supabase · Jest

EDUCATION

Bachelor of Science in Computer Science — Virtual University of Pakistan 2026

Modern Web & Mobile App Development — Saylani Mass I.T Training (SMIT) 2021 – 2023

AWARDS & LANGUAGES

Problem Solver of the Year, Techloset Solutions — 2024. Awarded for turning critical technical obstacles into shipped solutions.

Languages Urdu and Punjabi (native) · English (C1–C2, professional working proficiency)
